

This Jupyter Notebook is an entry to Technical Assignment (Data Science) for Apigate, January 2020.

Author: Ahmad Lokman Anuar

Question 2

Apply machine learning technique to predict any interesting topic of this.

Problem of Choice

We will use ML method to predict the case of flight delays based on Carrier On-Time Performance Report (Nov 2019) for all flights in the US. Available from https://www.transtats.bts.gov/DL_SelectFields.asp?Table_ID=236

General work flow:

1. Environment setup, load dataset, and review data.
2. Clean-up to organize data.
3. Descriptive Analysis to summarize data.
4. Implement ML classifiers.
5. Evaluate performance

1. Environment Setup, Load Dataset, Review data

In [1]:

```
library(readr)
library(tibble)

flights <- read.csv2('./404528202_T_ONTIME_REPORTING/404528202_T_ONTIME_REPORTING.csv', sep=",", header=TRUE, stringsAsFactors = FALSE)
# View top of dataset
head(flights)
```

A data.frame: 6 × 22

	DAY_OF_MONTH	DAY_OF_WEEK	OP_UNIQUE_CARRIER	OP_CARRIER_AIRLINE_ID	OP_CARRIER	TAIL_NUM	OP_CARRIER_FL_NUM	<in>
1	<int>	<int>	<chr>	<int>	<chr>	<chr>	<int>	<in>
2	1	5	YV	20378	YV	N905J	598	
3	1	5	YV	20378	YV	N950LR	598	
4	1	5	YV	20378	YV	N916FJ	598	
5	1	5	YV	20378	YV	N919FJ	598	
6	1	5	YV	20378	YV	N905J	598	

We will try to observe the whole dataset contents and dimension using simple \$print\$.

In [2]:

```
print(flights)
```

	DAY_OF_MONTH	DAY_OF_WEEK	OP_UNIQUE_CARRIER	OP_CARRIER_AIRLINE_ID	OP_CARRIER	TAIL_NUM	OP_CARRIER_FL_NUM	<in>

[ reached 'max' / getOption("max.print") -- omitted 597908 rows ]

```

It is observed that the dataset is very large and exceed maximum limit of print. Over 500,000 rows omitted from view.

## 2. Clean-up and Organize Data.

As the downloaded dataset dimension is overwhelming (over 600,000+ rows of data), the dataset will be randomly downsampled to take 5% of total rows.

In [3]:

```

library(dplyr)

set.seed(10) #seed number is set to ensure reproducibility

```

Attaching package: 'dplyr'

The following objects are masked from 'package:stats':

filter, lag

The following objects are masked from 'package:base':

intersect, setdiff, setequal, union

In [4]:

```

flightsampled <- sample_frac(flights, 0.05) #random downsample 5%

```

In [5]:

```

print(flightsampled) #Inspect full dataset dimension.

```

[ reached 'max' / getOption("max.print") -- omitted 25578 rows ]

```

At the bottom section, we know the dataset was downsampled to over 25,000 rows. For fast execution, we take this size as fit for analysis.

In [6]:

```
# Group flights

ontime <- flightsampled[!is.na(flightsampled$ARR_DEL15) & flightsampled$ARR_DEL15!="" & !is.na(flightsampled$DEP_DEL15) & flightsampled$DEP_DEL15!="", ]
```

Change the data class of the filtered data to enable data processing and running algorithms.

In [7]:

```
ontime$DAY_OF_WEEK <- as.factor(ontime$DAY_OF_WEEK)
ontime$DISTANCE <- as.integer(ontime$DISTANCE)
ontime$CANCELLED <- as.integer(ontime$CANCELLED)
ontime$DIVERTED <- as.integer(ontime$DIVERTED)
ontime$ORIGIN <- as.factor(ontime$ORIGIN)
ontime$DEP_TIME_BLK <- as.factor(ontime$DEP_TIME_BLK)
ontime$OP_CARRIER <- as.factor(ontime$OP_CARRIER)
ontime$ARR_DEL15 <- as.factor(ontime$ARR_DEL15)
ontime$DEP_DEL15 <-as.factor(ontime$DEP_DEL15)
ontime$DEST <- as.factor(ontime$DEST)
```

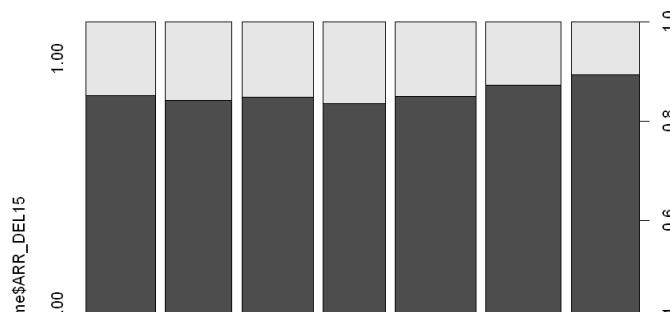

3. Sample Descriptive Analysis to summarize data.

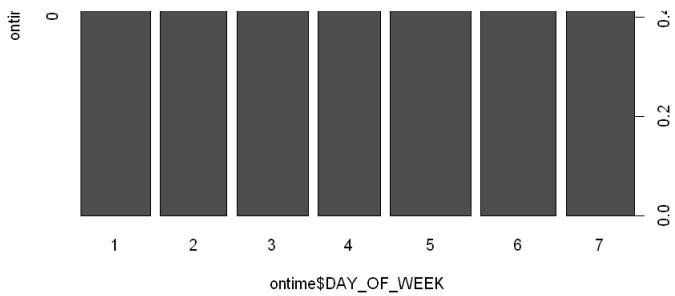

The following plot looks for delays by day of week, it's observed that distribution of delay incidence is generally uniform with slight difference across days of the week.

However the day-7 (Saturday) records higher delay incidence. Multiple reasons can be attributed to this, for example high influx of travellers for the start of weekend.

In [8]:

```
plot(ontime$ARR_DEL15 ~ ontime$DAY_OF_WEEK)
```

4. Implement ML Classifiers

The following code shows the creation of the training and testing data.

In [9]:

```
# PART 2: TRAINING DATA

library(caret)

Loading required package: lattice

Loading required package: ggplot2
```

In [10]:

```
set.seed(13)

# Select columns to be used in algorithm training

feature<- c("ARR_DEL15", "DAY_OF_WEEK", "OP_CARRIER", "DEST", "ORIGIN", "DEP_TIME_BLK")

# Created sorted version of the ontime data

ontime_sorted <- ontime[,feature]

# Select data to put into training

training_index <- createDataPartition(ontime_sorted$ARR_DEL15, p=0.75, list=FALSE)

# Create training & testing dataset

training_data <- ontime_sorted[training_index,]
testing_data <- ontime_sorted[-training_index,]
```

Model Evaluation and Results

We implement one classifier for fast execution of the dataset. Our algorithm of choice is Logistic Regression.

In [11]:

```
# METHOD 1: Logistic Regression

log_reg_mod <- train(ARR_DEL15 ~ ., data = training_data, method = "glm", family = "binomial",
                      trControl=trainControl(method = "cv", number = 5, repeats = 5))

# Predict

log_reg_predict <- predict(log_reg_mod, testing_data)

# Confusion matrix

confusion_matrix_reg <- confusionMatrix(log_reg_predict, testing_data[, "ARR_DEL15"])
confusion_matrix_reg

Warning message:
`repeats` has no meaning for this resampling method.

Warning message:

Conclusion

The logistic regression model has an accuracy rate of 85 %. It is logical, because using small downsampled of dataset which further used for training and testing will create bias. However, it is sufficient for the purpose of demonstration.

Future Improvements

- The model can be made better by implementing **hyperparameter tuning** the Logistic Regression package to find best parameter.
- The model can also be optimized through **Ensemble Method** where different algorithms will consolidate their weightage to a unified model which has compounded performance.
- **Feature Engineering** can also increase the quality of dataset and unearth more correlation between features.
